Experiment No.2
Accepting Input Through Keyboard
Name : Parth Sadanand Gawad
Roll no : 68
Date of Performance:
Date of Submission:

Department of Artificial Intelligence & Data Science

Aim: To apply basic programming for accepting input through keyboard.

Objective: To use the facility of java to read data from the keyboard for any program

Theory:

Java brings various Streams with its I/O package that helps the user perform all the Java input-output operations. These streams support all types of objects, data types, characters, files, etc. to fully execute the I/O operations. Input in Java can be with certain methods mentioned below in the article.

Methods to Take Input in Java

There are two ways by which we can take Java input from the user or from a file

1. `BufferedReader` Class
2. `Scanner` Class

Using `BufferedReader` Class for String Input In Java

It is a simple class that is used to read a sequence of characters. It has a simple function that reads a character another read which reads, an array of characters, and a `readLine()` function which reads a line.

`InputStreamReader()` is a function that converts the input stream of bytes into a stream of characters so that it can be read as `BufferedReader` expects a stream of characters. `BufferedReader` can throw checked Exceptions.

Using `Scanner` Class for Taking Input in Java

It is an advanced version of `BufferedReader` which was added in later versions of Java. The scanner can read formatted input. It has different functions for different types of data types.

The scanner is much easier to read as we don't have to write throws as there is no exception thrown by it.

It was added in later versions of Java

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

It contains predefined functions to read an Integer, Character, and other data types as well.

Syntax of Scanner class

```
Scanner scn = new Scanner(System.in);
```

Code:

Using BufferedReader Class :

```
import java.io.BufferedReader;
```

```
import java.io.InputStreamReader;
```

```
import java.io.IOException;
```

```
public class Buff{
```

```
public static void main(String args[])
```

```
{
```

```
BufferedReader reader = new BufferedReader(new InputStreamReader(System.in));
```

```
try
```

```
{
```

```
System.out.print("Enter a line of text: ");
```

```
String input = reader.readLine();
```

```
System.out.println("You entered: " + input);
```

```
} catch (IOException e)
```

```
{
```

```
System.err.println("An error occurred while reading input: " + e.getMessage());
```

```
}
```

Vidyavardhini's College of Engineering and Technology

Department of Artificial Intelligence & Data Science

finally

{

try {

reader.close();

} catch (IOException e) {

System.err.println("An error occurred while closing the BufferedReader: " +

e.getMessage());

}

}

}

}

Output

```
java -cp /tmp/hXQsrp9UkP/Buf
Enter a line of text: iamvcetcollegestudent
You entered: iamvcetcollegestudent

=== Code Execution Successful ===
```

Department of Artificial Intelligence & Data Science

Using Scanner Class:

```
import java.util.Scanner;
```

```
public class Add{
```

```
    public static void main(String args[]) {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        System.out.print("Enter the first number: ");
```

```
        int num1 = sc.nextInt();
```

```
        System.out.print("Enter the second number: ");
```

```
        int num2 = sc.nextInt();
```

```
        System.out.print("Enter the third number: ");
```

```
        int num3 = sc.nextInt();
```

```
        int sum = num1 + num2 + num3;
```

```
        System.out.println("The sum of the three numbers is: " + sum);
```

```
        sc.close();
```

```
    }
```

```
}
```

Output

```
java -cp /tmp/dqVIQr4oU2/Add
```

```
Enter the first number: 25
```

```
Enter the second number: 35
```

```
Enter the third number: 20
```

```
The sum of the three numbers is: 80
```

```
=== Code Execution Successful ===|
```

Conclusion:

Buffered Reader:

More efficient for large data or text reading, better suited for file and stream operations.

Scanner:

User-friendly for various input types, best for simple and interactive input scenarios.
